

How to add iButton tags to your driver's profile

If you are using Argus's iButton Driver ID hardware in your vehicles, you will need an iButton tag for each driver, and the configuration kit (both are supplied by Argus).

To set up a new iButton tag, please follow the steps below:

1. Plug the new configuration kit into your computer.
2. On the Argus Hub website, select Settings from the side menu, then Users and Drivers.
3. Search for the driver you wish to assign the new tag to, then click **Edit** next to this driver.
4. Click into the Driver ID Tag box so that the cursor is in the box, is as shown in the image below.

Asset Groups 

Select Groups

Driver App

Disabled

Driver ID Tag

Drivers Licence Number

Drivers Licence Version

5. Place the iButton tag on to the round metal part of the configuration kit. You will hear a beep sound, then the driver page will close, once the id tag has been set up and saved.
